## PROJECTS

### Ecomm - Online Banking [Bank of America]

- Migrated legacy FTL pages to Sparta (React- based), modernized UI components and improved performance through streamlined API integration.
- Implemented Family Banking in the Cards module, enabling users to manage and view linked family accounts.
- Developed the Manage Spending Categories module to let users view, filter, and categorize card transactions for better financial insights.
- Built the Mortgage Loan UI displaying user- specific loan details with dynamic rendering and real- time REST API integration.
- Designed a dynamic UI for Washington D. C. customers to display loan pre- closure laws, ensuring compliance through geolocation- based conditional rendering. Built it to support easy updates for future regional regulations.

### ETSS - Employee Tracking [TCS]

- ETSS (Employee Tracking System) is a role-based employee management application designed and developed entirely from scratch.
- The platform helps organizations efficiently track and manage employee information within specific accounts.
- Implemented secure login with three user roles – Admin, HR, and User – each with distinct permissions and dashboards.
- Developed modules to track complete employee details tied to specific accounts, including personal info, role assignments, and activity logs.
- Ensured robust form handling with reactive forms and validation for accurate data entry.
- Integrated with backend services using RESTful APIs for CRUD operations and secure data handling.
- Focused on optimizing loading times, reducing memory leaks, and ensuring responsiveness across devices.

### CAPE- Reporting and Analysis Solution (RAS) [FIS]

- CAPE RAS is a Reporting & Analysis Solution for the Modern Banking Platform, designed to process data from various components like Retail Deposits, Commercial Deposits, Retail Lending, and Enterprise Customers.
- It offers Operational Reports, Dashboards, Metadata Management, and Change Analytics. .
- Supported multitenancy, multi- currency, and multi- lingual features for global banking environments.
- Users can customize and generate reports based on their needs, and download them in PDF or Excel formats.
