Aravindalochanan Ramanujam

AI Engineering | Prompt Engineering | Full-Stack Engineer | React.js & Angular | Node.js | Python | MongoDB

Software developer with 7+ years of experience designing and building scalable, high-performance web applications with React and Angular across fintech and enterprise domains. Proven track record of translating complex business and design requirements into responsive, reusable, and accessible UI components, integrating RESTful and GraphQL APIs, and delivering cloud-hosted, production-grade solutions on Microsoft Azure and AWS. Currently expanding into AI-powered development — building apps with Claude, Codex, and GitHub Copilot — with growing hands-on exposure to agentic AI workflows, LLM integrations, and prompt engineering.

CORE COMPETENCIES

React.js • Angular & Angular Material • TypeScript / JavaScript (ES6+) • Redux • Node.js • Python (FastAPI) • RESTful APIs & GraphQL • Responsive & Component-Driven UI • Microsoft Azure & AWS • CI/CD & DevOps • Agile / Scrum • AI-Assisted & Prompt-Driven Development

WORK EXPERIENCE

AI Engineer / Technical Consultant
12/2025 – Present

D4 Insight | Chennai

- Built and shipped multiple React-based, AI-powered web applications using Claude, Codex, and GitHub Copilot, moving from prompt to production with minimal manual scaffolding and faster iteration cycles.
- Developed Workforcenexa, transforming it from a single-purpose AI-powered recruitment tool into a complete HRMS, Finance, and Employee Usage platform — full-scale development is newly underway and actively in progress, with a multi-agent AI architecture and a microfrontend/microservices architecture (People, Finance, Auth, Recruitment) built using React and Python (FastAPI) with PostgreSQL, deploying to AWS EC2.
- Architected reusable, modular React component libraries and design patterns, translating Figma mockups into responsive, pixel-accurate, production-ready UI.
- Integrated RESTful and LLM-powered APIs for resume parsing, candidate matching, and intelligent document workflows, improving screening turnaround time.
- Gained hands-on exposure to agentic AI concepts and LLM-powered workflows, exploring intelligent document processing use cases within banking contexts.
- Collaborated with the AI Center of Excellence (CoE) team to embed AI tools into development pipelines, improving delivery speed and experimenting with prompt engineering and model evaluation techniques.

System Engineer
01/2023 – 12/2025

Tata Consultancy Services | Chennai

- Developed front-end features using Angular components, services, directives, and modules based on business requirements and client mockups, ensuring consistent behavior across modules.
- Built and styled UI screens using Angular Material components and Flex Layout, delivering a consistent, accessible design system across the application.
- Built CMS integrations using RESTful HTTP services to dynamically manage application content and reduce manual content-release effort.
- Refactored legacy Angular modules for improved performance, reducing load times and eliminating redundant HTTP calls.
- Analyzed requirements and delivered scalable front-end solutions aligned with best practices and coding standards.
- Managed multiple concurrent projects with timely delivery, quality assurance, and adherence to system compliance requirements.

Programmer Analyst
03/2020 – 12/2022

FIS Global Solutions | Chennai

- Provided full front-end development support across the project lifecycle, from requirement analysis to deployment.
- Built UI templates, layouts, and forms using Angular and Bootstrap based on business requirements from the Modern Banking Platform team.
- Implemented client-side form validations and reusable UI directives to reduce duplicate code across modules.
- Fixed and unit-tested bugs raised by the QA team, maintaining a high first-time-fix rate.
- Took builds of the application and deployed them to OpenShift through Jenkins, supporting reliable release cycles.

Data Analyst *03/2019 – 02/2020*

Urjanet Energy Solutions | Chennai

- Top performer with a consistent track record of meeting SLAs and quality metrics across multiple customer accounts.
- Iteratively troubleshot data defect tickets, providing detailed root-cause analysis (RCA) to engineering teams.
- Communicated requirements through Jira with subject-matter experts (SMEs) and tracked issues through to resolution.
- Maintained detailed documentation of recurring defect patterns to support faster future troubleshooting.

SKILLS

Languages & Frameworks: React, Angular, Angular Material, Redux, Node.js, TypeScript, JavaScript (ES6+), Python, FastAPI, HTML5, CSS3

API & Integration: RESTful APIs, GraphQL, API Gateway concepts (Azure API GW / AWS API GW), Postman, SoapUI, SMTP, Mail Automations

AI & Dev Tools: Claude, GitHub Copilot, OpenAI Codex, Prompt Engineering, LLM Integrations, Multi-Agent AI Systems, Agentic AI Orchestration, AI-Powered Workflow Automation, Intelligent Document Processing

Architecture & Systems Design: Microfrontend Architecture (Module Federation), Microservices Architecture, Domain-Driven Design, Multi-Agent System Design, Service Orchestration

Testing & Quality: Jest, Mocha, Enzyme, ESLint, Prettier, Unit & Integration Testing

Infrastructure & Databases: OpenShift, Jenkins, MongoDB, PostgreSQL, Oracle, Microsoft Azure, AWS, Docker, Kubernetes basics, Git, CI/CD

UI & Styling: Tailwind CSS, Bootstrap, Flex Layout, Responsive & Component-Driven Design

Tools & Collaboration: Jira, Confluence, Figma, VS Code, IntelliJ

Methodologies: Agile, Scrum, Kanban, Test-Driven Development (TDD)

PROJECTS

Workforcenexa – AI-Powered HRMS, Finance & Employee Usage Platform [D4 Insight]

- Leading the evolution of Workforcenexa from a single-purpose AI-powered recruitment tool into a complete Human Resource Management System (HRMS) encompassing Finance and Employee Usage portals — full-scale development is newly underway and actively in progress.
- Implemented a multi-agent AI architecture, with specialized autonomous agents handling recruitment screening, HR case resolution, finance approvals, and employee self-service queries, coordinated through a central orchestration layer.
- Implemented a microfrontend architecture using Module Federation, decomposing the platform into independently built and deployed modules — People, Finance, Auth, and Recruitment — enabling parallel team development and faster, isolated releases.
- Similarly implemented a microservices architecture on the API layer, with each domain (People, Finance, Auth, Recruitment) exposed through its own dedicated service, improving scalability, fault isolation, and independent deployability.
- Built the front end with React using micro-frontend patterns, and the back end with Python (FastAPI) microservices and PostgreSQL, for scalable, modular data management across HR, finance, and recruitment domains.
- Extending AI capabilities beyond resume parsing to include AI-driven payroll and finance anomaly detection, natural-language HR query assistance, and agentic automation of repetitive HRMS workflows to reduce manual processing time.
- Built a centralized Auth microfrontend and service with role-based access control across the People, Finance, and Recruitment modules to support secure, multi-tenant usage.
- Setting up CI/CD pipelines and Azure-based deployment workflows tailored to a multi-service, multi-frontend architecture, enabling independent, reliable releases per module.
- Collaborating closely with recruiters, HR, finance, and hiring managers to define requirements for the expanded platform scope and validate agentic AI workflows and UI usability based on real-world feedback.

AI-Powered Web Application Development — Internal Project [D4 Insight]

- Built fully functional React web applications using AI tools (Claude, Codex, Copilot) — designed, scaffolded, and deployed to production primarily through prompt-driven workflows.
- Explored intelligent document processing concepts and agentic AI patterns within banking use cases, gaining practical exposure to LLM integrations and automated data extraction flows.
- Documented reusable prompt patterns and internal best practices to speed up future AI-assisted builds.

Ecomm – Online Banking [Bank of America]

- Migrated legacy FTL pages to the Sparta React-based platform, modernizing UI components and improving performance through streamlined REST API integration.
- Implemented Family Banking in the Cards module and built the Manage Spending Categories feature for filtering and categorizing card transactions using React.
- Developed the Mortgage Loan UI in React with dynamic, real-time REST API data rendering for user-specific loan details.
- Designed a geolocation-based conditional rendering system in React for Washington D.C. customers to display loan pre-closure laws, extensible for future regional regulation changes.
- Partnered with QA and business analysts to validate edge cases across card and lending workflows prior to release.

ETSS – Employee Tracking System [TCS]

- Designed and built a role-based Angular employee management application from scratch with three user roles (Admin, HR, User), each with distinct permissions and dashboards.
- Used Angular Material to build a consistent, accessible component library across all dashboards and forms.
- Developed modules to track comprehensive employee details tied to accounts, including personal info, role assignments, and activity logs with reactive form validation.
- Integrated RESTful APIs for full CRUD operations and secure data handling, with optimizations for loading time, memory leaks, and cross-device responsiveness.
- Ensured robust data integrity through form-level validation and backend service integration for real-time data accuracy.

CAPE – Reporting and Analysis Solution (RAS) [FIS Global]

- Contributed to a Reporting & Analysis Solution for the Modern Banking Platform, processing data across Retail Deposits, Commercial Deposits, Retail Lending, and Enterprise Customers.
- Built Operational Reports, Dashboards, and Change Analytics modules using Angular for business users to extract insights from complex financial datasets.
- Supported multitenancy, multi-currency, and multilingual configurations to serve diverse global banking environments.
- Implemented customizable report generation allowing users to configure, preview, and export reports in PDF or Excel formats.
- Coordinated with QA and business teams across regions to validate report accuracy ahead of each release cycle.

KEY ACHIEVEMENTS

- Leading the transformation of Workforcenexa from a single-purpose AI recruitment tool into a full-scale HRMS, Finance, and Employee Usage platform, architecting multi-agent AI, microfrontend, and microservices foundations from the ground up.
- Adopted AI-assisted, prompt-driven development (Claude, Codex, Copilot) to move applications from prompt to production with minimal manual scaffolding, shortening delivery cycles.
- Built and maintained Angular Material-based component libraries reused across multiple enterprise modules, improving UI consistency and development speed.
- Consistently met SLAs and quality metrics across fintech and enterprise engagements at TCS, FIS Global, and Urjanet Energy Solutions.
- Contributed to large-scale banking platforms (Bank of America, FIS Global) supporting critical lending, deposits, and reporting workflows.
- Worked across fintech, banking, and enterprise recruitment technology domains, with primary interests in AI-assisted software development, front-end architecture, and prompt engineering.
